WEB PORTFOLIO

Website

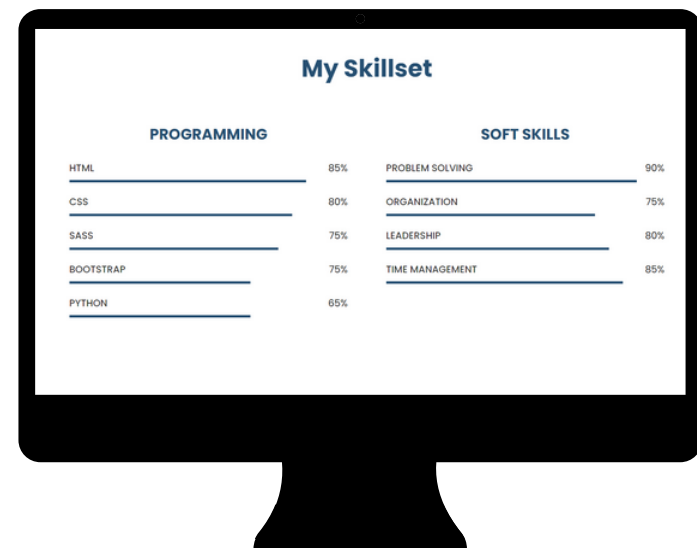

GitHub

by Diego Maggioni

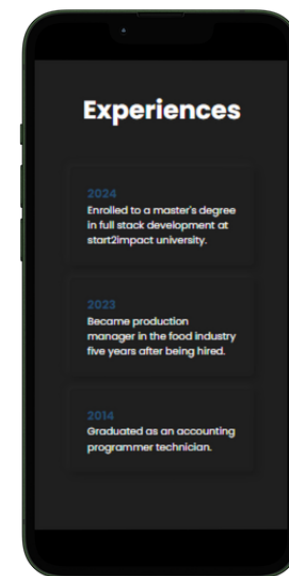

CONTENT

SKILLSET

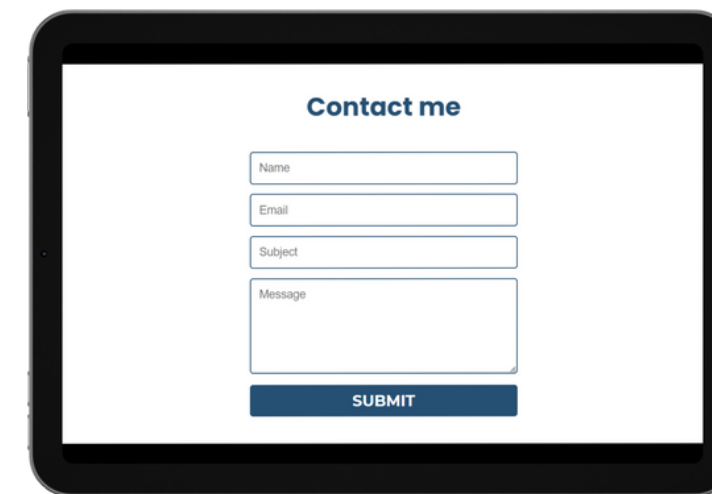

In this section, I have added my programming **skills** and my soft skills.

EXPERIENCES

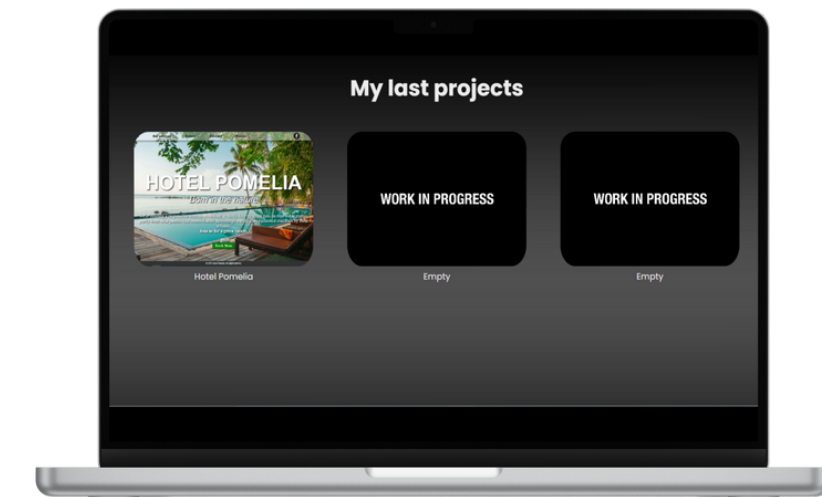

For the experiences, I've designed a **timeline** that begins with the most recent and progresses to the least recent.

CONTACT

In the contact form, I've integrated the **EmailJS** service to receive requests made through this form directly to my email.

PORTFOLIO

I have created the **portfolio** section on a separate page so that I can update and expand it as I create new projects.

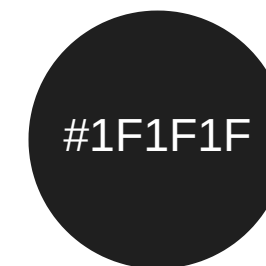

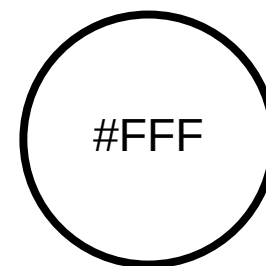

DESIGN

FONT: POPPINS

For the typography, I chose the "Poppins" font to achieve a **simple** yet **impactful** appearance.

Font imported from:
<https://fonts.google.com>

COLOR PALETTE:

For the choice of **colors**, I opted for two base colors: white and a slightly lighter black, ensuring a good contrast. As the third color, I chose one that represents me the most. Additionally, I used the **photo** as a background to achieve a dark effect.

ICON: REMIXICON

For the social media icons, I used the website [**https://ionic.io/ionicons**](https://ionic.io/ionicons) selecting those that were most consistent with the theme I wanted to represent.

RESPONSIVENESS

In the **landing page**, the website remains the same for both desktop and tablet, with the text aligned to the left. However, for the mobile version, the text is centered. The sections "**Experiences**" and "**Contact**" remain consistent across all versions, while in the "**Skillset**" and "**Portfolio**" sections, on the mobile version, they are displayed vertically.
